> To adjust **Settings** select the device by clicking the name.

> There are pre-set profiles you can select and edit to create a custom color scene.

For more info on changing scenes, visit LED Info on our website.

18 Power on the Hub and make sure the blue and red lights are blinking.

If lights are NOT blinking press and hold button on the side for a few moments then release.

Device Settings

19 Available devices will show up.

Select "Bluetooth Mesh Gateway" by clicking the blue plus sign.

Tips

- Lights must be blinking or breathing to be added as a device.
- When resetting it is important to power ON-OFF-ON-OFF-ON in 3 second intervals to put the light in paring mode.
- A gateway hub is required for settings and schedules that utilize time of day, weather and music syncing.
- A gateway hub is required at <u>each</u> location that is on a <u>different</u> Wi-Fi network.
- Multiple hubs can be added and managed on the same app.
- It is good practice to re-name all devices, including hubs, to be location and placement specific.
